Expanding instructional strategy QuickTime movies for full screen viewing.

Process for viewing QuickTime movie clips on full screen.

To expand the video clips for viewing in full screen it is necessary to use QuickTime and your video player. If you chose one of the Flash player options you must change to the QuickTime player. Selecting an instructional strategy and moving to the movie listing for that strategy is the first step in this process. On this page is a button, "Change Your Video Format". Click on this button.

A new window opens titled "Choose your Video Format". Select QuickTime as your player.

After making this selection, Click "Save".

A new window appears informing you that you made a selection and that preference is saved.

Click "Close Window".

Now select the video clip you wish to share from the movie list by clicking on the link.

The format has been changed successfully

Click "Close Window".

The movie will open in a new window and begin loading for playback.

Allow the movie to begin playing, click the II and the movie will pause. When the pause button is pressed, click on the large black "Open the movie in QuickTime for large display" button.
